December 1, 2009

Dear Bob,

This letter is certification that the enclosed are 1st run samples of Reprotone Inc.'s guitar picks. These picks were made in the United States of America with reprocessed raw materials. While this is a nice catch phrase and sentiment, it is also a fact that we at Reprotone Inc. take seriously and stand behind. When we say made in the "USA," we mean the part and tooling design, the manufacture of the injection molds, the raw material reclamation and reprocessing, and the final molding of the picks were all done in the United States. We'd also like to point out that our Nylon and P.E.T.E. picks are produced with 100% recycled material. We feel this is important because any Nylon or P.E.T.E. that we can recycle keeps that plastic out of a landfill. Aside from limiting the range of colors we can produce for our Nylon picks, there is no reason not to use recycled materials in our process.

We've enclosed three styles of guitar picks in several thicknesses, indicated in millimeters below our logo on the "A" side of the pick. At this time we offer .50mm, .75mm, and 1.0mm thick picks. The "B" side of the pick indicates the type of material we used to mold the pick. Those labeled "100% Shag-PA66" are made from 100% recycled nylon 6/6. The picks that are labeled "RE-PETE" are made from 100% recycled P.E.T.E. The pick with the coiled snake on the "B" side is our premium pick. Produced from a copper filled nylon, with 10% post consumer nylon mixed in, these picks are the only copper filled nylon picks that we know of in the world. The copper gives the pick additional mass as well as producing what we feel is a unique tone. We have other materials planned, but feel that these three are a good start.

All three styles of pick are available with custom engraving on the "B" side for a relatively small set up fee and minimum run quantity. This engraving is limited to .750" in diameter and will be embossed or "proud" on the pick itself. If this custom engraving option is of interest to you, please contact us through our website (www.reprotone.com) for details regarding special orders. Feel free to contact either of us to provide any feedback that you may have regarding the picks that we've enclosed. We've sent a few samples in each material and thickness, so please share them with your friends and fellow musicians. We hope you love them!

Best Regards,

Bill and James Humphrey
